MONTU CHAVDA

Quant Intern – Financial Data Analysis | Time Series | Machine Learning
Ahmedabad, India
Phone: +91-9313658109 | Email: montuchavda456@gmail.com
LinkedIn: linkedin.com/in/montu-chavda-3a2688254

OBJECTIVES

Aspiring Quant Trading Intern with a strong foundation in **machine learning**, **time series analysis**, and **Python-based data modeling**. Passionate about applying **statistical and ML-driven strategies to financial markets**, with hands-on experience in **predictive modeling**, **financial data analysis**, and **risk evaluation**. Seeking to contribute to **quantitative trading research** and **live market analysis** in a **technology-driven trading environment**.

CORE SKILLS

High Proficiency (★ ★ ★ ★ ☆ – 4/5)

- **Machine Learning & Deep Learning:** Scikit-learn, TensorFlow
- **Backend Engineering:** Python, Flask, Django, REST APIs
- **Data & Databases:** Pandas, NumPy, MySQL
- **Cloud & Deployment:** AWS (EC2, S3, RDS, Athena)
- **Generative AI:** LLMs, Prompt Engineering, RAG Pipelines

Working / Foundational Knowledge (★ ★ ★ ☆ ☆ – 3/5)

- **Agentic AI & Workflows:** LangGraph, LangChain

PROJECT EXPERIENCE

AI Job Finder – LangGraph-Based System

Timeline: November 2025 – January 2026
Technologies: Python, Flask, LangGraph (Basic), LLM APIs

- Implemented a Flask-based dashboard allowing users to upload resumes for AI-driven analysis.
- Executed resume parsing to extract core skills, experience level, and confidence indicators.
- Supported AI logic to identify suitable job roles based on resume analysis.
- Assisted in implementing location-based job discovery, matching user profiles with available openings.
- Enabled advanced search functionality by job role, location, and job type.
- Supported RAG pipelines to ground job recommendations on real job data sources.
- Implemented validation logic, explainable scoring, and basic AI safety guardrails.
- Assisted in exposing Flask REST APIs for dashboard and backend integration.
- Implemented redirect workflows to company career and job pages upon job selection.

Generative AI Chatbot

Timeline: October 2025 – December 2025
Technologies: Python, LLM APIs, Vector Database, RAG, REST APIs

- Implemented a context-aware Generative AI chatbot using Gemini 2.5 via Flask-based APIs.
- Enabled AI-powered code generation for technologies such as Python, React, SQL, and JavaScript.
- Executed document ingestion, chunking, embedding, and retrieval workflows to support response generation.
- Applied prompt constraints, fallback logic, and validation checks to reduce hallucinations in generated code.
- Integrated secure REST APIs for backend and enterprise usage.

AI Order Management Dashboard Generator

Timeline: September 2025 – October 2025
Technologies: Python, Pandas, NumPy, ML Techniques, Generative AI

- Implemented an AI-driven order management dashboard that dynamically adapts based on user-provided prompts and business requirements.
- Supported AI logic to interpret daily operational inputs related to customers, products, services, and order customization.
- Executed ML-based data processing to structure raw order data into real-time dashboards for operational visibility.
- Assisted in detecting key performance indicators (KPIs), usage patterns, and basic anomalies from order data.
- Integrated Generative AI to automatically generate business insights and summaries from dashboard data.
- Supported backend workflows to ensure seamless data flow between user input, AI processing, and dashboard outputs.

AI-Powered Custom Survey Form Generator

Timeline: October 2025 – December 2025
Technologies: Python, Flask, Generative AI, JSON Schema, REST APIs, Security & Encryption

- Implemented an AI-driven survey form generator that creates custom survey forms based on user-defined business requirements.
- Supported a predefined schema-based approach, where AI converts business prompts into a structured JSON survey document.
- Enabled automatic generation of custom survey forms from JSON schemas with a shareable survey link.
- Implemented an alternative AI-assisted mode, allowing users to directly describe business needs and generate surveys without manual schema input.
- Supported secure survey sharing with access control options (public or restricted users).
- Assisted in implementing encrypted data transmission for survey responses.
- Enabled iframe embedding, allowing surveys to be integrated into external websites.
- Supported features similar to Google Forms, including customizable fields, validation, and response collection.

PROFESSIONAL EXPERIENCE

Python Backend Developer

Arihant AI, Ahmedabad | *June 2025 – February 2026*

- Assisted in implementing Generative AI-powered ERP modules using Python, Django, and Odoo.
- Supported LangGraph-based workflows for AI-driven features under senior guidance.
- Implemented backend business logic and assisted with REST API development and optimization.
- Supported MySQL database management, query optimization, and data validation.
- Assisted in development, testing, and validation of Voice AI agents.
- Prepared technical documentation, user guides, and project reports.
- Created meeting minutes (MoM) and tracked action items with teams and clients.
- Coordinated with clients for requirement clarification, follow-ups, and issue resolution.
- Performed testing, bug fixing, and validation before and after production releases.
- Provided post-production support and handled live system issues.
- Assisted with website migration and backend deployment activities.
- Supported international client projects with timely delivery and clear communication.
- Participated in client demos, workshops, and knowledge transfer sessions.

EDUCATION

- **M.Sc. Information Technology (FinTech)** – Gujarat University *(Expected 2026)*
- **B.Sc. Information Technology (FinTech)** – Gujarat University *(2024)* | **SGPA: 8.0**
- **HSC (12th)** – Gujarat Board
- **SSC (10th)** – Gujarat Board

CERTIFICATIONS

- **Generative AI Certification** – LLMs, RAG, Prompt Engineering, AI Safety
- **Data Analytics Job Simulation** – Forage
- **Data Analyst Certification** – Udemy
- **Data Analytics Certification** – Coursera
